

MATH40006 Introduction to Computation

Lectured by Dr Phil Ramsden

Typed by Yu Coughlin

Autumn 2023

Syllabus

This module provides a transition towards the way you will be thinking about, and doing, Mathematics during your degree. It will stress the importance of precise definitions and rigorous proofs, but also discuss their relationship to more informal styles of reasoning which are often encountered in applications of Mathematics. Topics to be covered will include an introduction to abstract sets, functions and relations, common proof strategies, the naturals, rationals and reals, and elementary vector operations and geometry.

Notation. If K is a field, or a ring, I denote

$$K[X] = \{a_0 + \cdots + a_n X^n \mid a_i \in K\},$$

the **ring of polynomials** with coefficients in K .
